Enhance productivity with managed mobile Office apps

66% of employees use personal devices for work purposes*

52% of information workers across 17 countries report using three or more devices for work**

90% of enterprises will have two or more mobile operating systems to support in 2017***

80% of employees admit to using non-approved SaaS applications in their jobs****

When you combine Office 365 with the Enterprise Mobility Suite, you give employees the freedom to work securely from virtually anywhere, on any device, with the gold standard of productivity tools: O365.

• Enhance employee productivity in the office or on the road with reliable access to mobile apps, tools, and data
• Keep sensitive data protected without the need for complex security configurations
• Seamlessly manage employee devices, apps, and data through one simple IT admin portal
• Give remote workers access to the familiar Office apps and productivity tools they love

Synchronized identity management
Improve employee productivity with single sign-on to Office mobile apps, over 2,500 popular SaaS apps, and on-premises web apps. Enable self-service options to allow users to manage groups, passwords, devices, and apps, reducing the need for IT troubleshooting assistance. Now your employees have access to the information, tools, and intuitive Office 365 apps they need, whenever they need it.

Mobile app and device management
Empower BYOD with secure device management that ensures even personal devices are protected and compliant. Deploy the Office mobile apps so that every enrolled device becomes a powerful work tool. Now your employees can work with the Office 365 apps they know, from the devices they love.

Help protect sensitive information
Protect corporate data by allowing more secure access to company resources and enable safe sharing of sensitive information inside and outside of your organization. Easily apply encryption policies at the file level that follow the file within your organization and outside of your organization. Now your data is protected anywhere—even on the go.

Maximize productivity with the combined benefits of Microsoft Enterprise Mobility Suite + Office 365

The Enterprise Mobility Suite (EMS) is the only comprehensive cloud solution that can manage identities, devices, apps, and data. EMS includes three products: Microsoft Azure Active Directory Premium, Microsoft Intune, and Microsoft Azure Rights Management Services.

Office 365 is a cloud-based service that provides users with access to industry-standard Office productivity apps like Word, PowerPoint, Excel, Publisher, and Outlook from any location with a secure internet connection. Office 365 is designed for employees who want the flexibility to take their work with them, wherever they go, without sacrificing the user experience.

Together, the EMS + Office 365 suite offers a complete managed mobile productivity solution that enables your users with the gold standard of productivity and deeply integrated protection for company data.

Identity and access management with EMS provides employees a single set of credentials to simplify sign-in to Office 365 apps, on-premises web apps, and over 2,500 popular SaaS apps like Salesforce, Workday, and Concur.

Mobile device and application management with EMS provides IT control while enabling employees to work securely from the device of their choice. Deploy and manage Office mobile apps to enrolled devices to support new work styles without compromising security.

Access and information protection with EMS applies control policies at the file level so that information can be shared securely within and outside the organization. Data encryption, identity, and authorization policies ensure that sensitive information created in Office 365 is protected.

Organizations can provide their employees with access to corporate applications, data, and resources from nearly any location on nearly any device, while keeping sensitive data protected.

Users have the ability to self-manage groups and password resets.

Azure Rights Management Services allows senders to encrypt individual files and share them with intended recipients both inside and outside of your organization. Senders have the authority to define privileges and editing capabilities based on the user and/or file. Furthermore, Azure Rights Management Services supports policy enforcement by allowing administrators to designate their own custom policy templates and give IT the ability to define policies that meet certain business and compliance requirements.

Enable employees to work and collaborate from virtually anywhere with access to email, calendar, and all productivity apps from nearly any device.

Manage all the cloud services that come with Office 365—emails, sites to share documents, conferencing, and productivity apps—from one centralized, web-based administrative console. With role-based access, IT can stay in control at all times, especially when it matters most.

The integration of Azure Rights Management Services with Office 365 eliminates the need for complex configurations for users to share sensitive information within and outside of the organization. The capability to share—and share securely—is built into the Office 365 foundation, making data sharing simple, readily available, and intuitive like never before.
